Forecast for Thursday 20 Jan 2022

Weather: A cloudy but bright start with a widespread frost, then sunny spells developing through the day, especially so across Loch Lomond and the Trossachs. Cloud will thicken and gradually lower through evening, bringing patchy snowfall to munro level and above late evening.

Chance of cloud free mountain/hill tops above 800m: 80%.

Visibility: Areas of cloud above around 1000m through morning, these lifting a little through the day. Away from these, visibility will be very good through daylight hours. Cloud starts to descend more widely down to 400-600m through late evening, particularly so across Glencoe and the Nevis range.

Met Office Aberdeen Meteorologist's View
Largely dry conditions but note the significant wind chill. Be aware of deteriorating conditions after dark.

Forecast for Friday 21 Jan 2022
Weather: Westerly winds will bring milder air and extensive cloud, this leading to patchy rain or drizzle and summit snow across all areas, but the West Coast ranges will take the worst of this. Largely dry with some brighter spells for the Trossachs. Poor visibility will be the main hazard.

Maximum wind: West 15-25mph.

Chance of cloud free mountain/hill tops above 800m: 10%.

Visibility: Generally quite limited and dull with extensive cloud shrouding most ground above 400-500m. Highest ground may break through the top of the cloud, but low confidence for this at this stage. Some breaks possible across the sheltered east.

Temperature: **Glens:** Plus 3 or 4 Celsius rising 7 or 8 Celsius.
At 800m: Around freezing.
Freezing level: 1000-1200m.
